Why is solar energy important?

Solar energy creates free, renewable power from the sun. It's abundant and produces no carbon emissions or local air pollution. Still, about 60% of the electricity that power plants generate in the U.S. comes from fossil fuels like coal and natural gas, which we know contribute to issues related to global warming and climate change.

Why should you buy a solar system?

The primary advantage of solar energy is that it freezes your energy costs at a low rate for 25+ years, effectively shielding you from energy price increases. Here's how buying a solar system compares to paying for grid electricity looks for the average American household:

Why should you install a solar energy system?

Solar panels draw their energy from the renewable resource that is our sun. Not only does installing a solar energy system reduce your reliance on fossil fuels (which improves your air quality and protects the environment), but it can also save you \$25,000 to over \$110,000 over its lifetime.

Are solar panels a good investment?

By producing clean energy, you are reducing your local utility's reliance on fossil fuels and thereby reducing local carbon emissions that contribute to poor health outcomes like childhood asthma. In addition to energy savings, solar panels offer a second form of return on investment in increased home value.

List of the Advantages of Solar Power. 1. Solar power is a sustainable resource everyone can use. When we start using solar power consistently, then we are creating a reduction in the use of fossil fuels. Even though we need combustible resources to create the panels that collect energy from the sun, net greenhouse gas emissions savings can ...
