For EVs, one reason for the reduced mileage in cold weather conditions is the performance attenuation of lithium-ion batteries at low temperatures [6, 7]. Another major reason for the reduced mileage is that the energy consumed by the cabin heating is very large, even exceeding the energy consumed by the electric motor [8]. For ICEVs, only a small part of the ...

However, most of PCMs have the disadvantage of low thermal conductivity, which limits the applications in cooling system. PCMs have received increasing attention for their applications in fields such as solar energy storage and thermal management [70]. However, low thermal conductivity is a major issue that hinders their practical applications.
