What is an automatic changeover system?

Automatic changeover systems are designed to monitor and maintain continuous supply. Today's technology allows the supervision and control of an entire distribution system from a single controller, referred to as an automatic transfer switch (ATS) or automatic changeover unit (ACU).

What is an automatic changeover switch?

Automatic changeover switches, also known as automatic transfer switches (ATS), are used to automatically switch the load from the main power supply to an alternate source (like a generator, solar panels, batteries, wind power etc.) when a power outage occurs. This transition must be seamless to prevent downtime and damage to sensitive equipment.

How do I set up an automatic changeover switch?

To set up an automatic changeover switch for a 3-phase load, you will need the following components: Automatic Changeover Switch (ATS): This is the heart of the system. It is responsible for switching the load between the main power supply and alternate power sources e.g. generator.

Do you need an automatic changeover switch?

In today's fast-paced life, power cuts and loadsheddings are no longer acceptable. To ensure that your homes and offices have power throughout, you must have a source of backup power, like generators with automatic changeover switches. What is an automatic changeover switch?

Why do we need an automatic power changeover?

The provision of alternative power source (generators) has no doubt brought succour but not without an attendant challenge associated with manual operation of the changeover [3,4] therefore, the need for an automatic changeover. Automation of power generation is required as the rate of power outages becomes predominantly high.

Why should you choose an automatic changeover switch with remote control?

Automatic changeover switches with remote control offer convenience and remote operation. Intelligent automatic changeover switches provide advanced features for critical applications. In conclusion, the choice of automatic changeover switch depends on the specific requirements and application.

Automatic transfer switches act as the 'brain' of your entire electrical system. Once installed, they can automatically switch between electricity coming from your utility and generator power. When the transfer switch detects a power outage, it switches your home to generator power.

Automatic Changeover Switch Panel transfers electricity supply from the general grid power supply to a "generator system" in case of power outage. The changeover switch connects to the main power grid, generator or alternate source and the premise wiring. Automatic changeover is a valuable investment for all residential, commercial and industrial sectors.
