Ferroelectric materials are widely considered one of the best materials for physical applications due to their multifunctionalities, such as ferroelectricity, ferromagnetism, ferroelectric photovoltaic property, and ferroelectric resistive switching [1-5]. Meanwhile, lead-free ferroelectric materials are being accelerated exploration to take ...

Ferroelectric all-inorganic halide perovskite nanocrystals with both spontaneous polarization and visible light absorption are promising candidates for designing ferroelectric photovoltaic applications. It remains a challenge to realize ferroelectric photovoltaic devices with all-inorganic halide perovskites that can be operated in the absence of an external electric ...

3. Ferroelectric RAM, is a form of random access memory that combines speed and Non-Volatility. A Ferroelectric memory cell consists of a ferroelectric capacitor and a MOS transistor. The most well-known ferroelectric substance is PZT(Lead Zirconate Titanate). Data is read by applying an electric field to the capacitor. The memory is non-volatile. FRAM allows ...
