Notwithstanding, renewable energy sources are the most outstanding alternative and the only solution to the growing challenges (Tiwari & Mishra, Citation 2011). In 2012, renewable energy sources supplied 22% of the total world energy generation (U.S. Energy Information Administration, Citation 2012) which was not possible a decade ago.

Non-renewable energy resources cannot be replaced - once they are used up, they will not be restored (or not for millions of years). Non-renewable energy resources include fossil fuels and nuclear power.. Fossil fuels. Fossil fuels (coal, oil and natural gas) were formed from animals and plants that lived hundreds of millions of years ago (before the time of the dinosaurs).
