Devices called solar furnaces and solar cells can turn solar energy into electricity. A solar furnace uses the Sun's heat to make electricity. It has mirrors that focus large amounts of solar energy into a small area. A solar furnace can produce temperatures of up to 3,630°F (2,000°C). This heat can be used to make steam.

Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy that correspond to the different wavelengths of the solar spectrum.. A PV cell is made of semiconductor material. When photons strike a PV cell, they may reflect off the cell, pass through the cell, or be absorbed by the semiconductor material.
