Can a small wind energy system provide a practical and economical source of electricity?

A small wind energy system can provide you with a practical and economical source of electricity if: Your home or business is located on at least 1 acre of land. Your local zoning codes or covenants allow wind turbines. You can determine how much electricity you need or want to produce.

What is wind energy & how does it work?

Depending on your wind resource, a small wind energy system can lower your electricity bill slightly or up to 100%, help you avoid the high costs of extending utility power lines to remote locations, and sometimes can provide DC or off-grid power. In addition, wind energy is clean, indigenous, renewable energy. How Do Wind Turbines Work?

What is a home wind energy system?

Home wind energy systems generally comprise a rotor, a generator or alternator mounted on a frame, a tail (usually), a tower, wiring, and the "balance of system" components: controllers, inverters, and/or batteries.

How does wind energy work?

Teacher training and hands-on curricula are implemented at each K-12 host school to bring the wind turbine into the classroom through interactive and interschool research tasks, engaging young people interested in science. Windustry offers information on wind energy for homes and farms, as well as community-scale wind projects.

How much land do you need for a wind turbine?

Although wind turbines large enough to provide a significant portion of the electricity needed by the average U.S. home generally require 1 acre of property or more, approximately 19.3% of the U.S. population lives in rural areas and may own land parcels large enough to accommodate a wind energy system.

What size wind turbine do I Need?

The size of the wind turbine you need depends on your application. Small turbines range in size from 20 Watts to 100 kilowatts (kW). The smaller or "micro" (20- to 500-Watt) turbines are used in applications such as charging batteries for recreational vehicles and sailboats. One- to 10-kW turbines can be used in applications such as pumping water.

Since wind systems are tall, you may not be able to install the system in a residential area depending on your zoning requirements. Check with local building inspectors or your city's homeowner's association to see if you're eligible for building a turbine. If zoning isn't an issue, then you can build a turbine on your property.
