

Cell phone with solar panel built in

How do solar phones work?

Solar phones have mini solar panels or photovoltaic cells built into the screen or phone body. These cells convert sunlight into electricity to charge the phone's battery. When exposed to the sun's rays, the solar panel absorbs solar energy and converts it into electrical energy to charge your phone.

What is a solar-powered phone?

Samsung was officially the first manufacturer to bring a solar-powered phone to market, back in 2009. The 'Solar Guru', or Guru E1107, was launched in India to address the problem of regular power outages. The handset was able to provide between five and 10 minutes of talk time off one hour of solar charging.

Are solar-powered phones a good idea for your home?

Solar-powered phones offer a glimpse into the future, but harnessing the sun's energy for your home provides a more tangible benefit today. Installing solar panels can significantly reduce your electricity bills and dependence on the grid, all while lessening your environmental impact.

Does a Samsung phone have a solar panel?

The phone has a solar panel integrated into its backplate. When exposed to an hour of sunlight, approximately 5 to 10 minutes of call time can be made. Made in 2009, this touchscreen phone was Samsung's answer to environmental issues affecting our world. Its body was made entirely from recycled materials and the backplate had a solar panel.

Do solar phones exist?

Yes, solar phones do exist but are not yet mainstream. They have been around since 2009, created by Samsung -- called the Samsung Blue Earth. However, it was ahead of its time and not a commercial success. From then on, other companies tried their hand at creating solar-powered phones, with each iteration improving on its predecessor.

Could solar power power our phones?

It feels like there's an obvious solution, right above our heads: the sun offers bountiful energy, and the idea of actually utilising solar power to power our phones is far from a fantasy.

Another portable solar panel option, Ascent Solar, manufactures solar panels for use in extreme environments. Their products are made in Thornton, Colorado, near Denver. They do all research and development, product design, manufacturing and production, and corporate office work at their 139,000-square-foot facility.
