

When was the first Central Electric station installed?

The first Central Electric Station was installed by Edison in New York in 1882 which operated at 110 V d.c. It is of interest to know as to why then a.c. almost replaced all d.c. lines and why direct current again is being used for some high voltage transmission lines.

How does power swing affect Pu nodal voltage?

Since the p.u. nodal voltages of the system are practically same, $K = 1$ and hence the effect of power swing is generally seen from the swing impedance locus corresponding to $K = 1$ as illustrated in Fig. 14.39. ZT $K > 1$ $K < 1$ $K = 1$ Fig. 14.38 Swing impedance loci.

Which countries have developed high voltage Convertors?

Extensive research has been carried out especially in Sweden for the development of high voltage convertors. Thyristors of ratings 50 kV and 100 amperes have been developed and now there are many countries in the world where the transmission of power over longer distances and high voltages is being done by d.c.

What is a 378 electrical power system?

This means for a differential relay, it 378 ELECTRICAL POWER SYSTEMS should have: (1) two or more similar electrical quantities, and (2) these quantities should have phase displacement (normally approx. 180°), for the operation of the relay.

What are the boundary conditions of 320 electrical power systems?

The boundary conditions are $I_a = 0$ (13.33) $V_b = 0$ (13.34) $V_c = 0$ (13.35) 320 ELECTRICAL POWER SYSTEMS and the sequence network equations are given by (13.18) - (13.20). I_a E_a E_c E_b b c I_b I_c I b $+I_c$ Fig. 13.12 A solidly grounded, unloaded alternator, L-L-G fault.

Is there a current in 106 electrical power systems windings?

There is no current in the 106 ELECTRICAL POWER SYSTEMS windings of the transformer bank and the r.m.s. current is less than twice that of the 3-phase circuit; thereby the winding is used efficiently. For waveform and the bridge circuit refer to Fig. 5.7.
