

# Connecting power cable for backup camera in toyota tacoma

How to mount a backup camera on a Toyota Tacoma?

Because of its cozy interior, the Tacoma does not offer too many alternative mounting locations. In a bigger vehicle, you may find a better spot and use hook-and-loop or double-sided tape to mount the monitor. The camera includes infrared imaging for nighttime visibility, a must for any backup camera. Install a backup camera on your car or truck.

How do you connect a camera to a Toyota Tacoma?

Close the tailgate and check the fit, finish and function of the handle and latch. Untuck the white camera plug and connect it to the factory connector under the Toyota Tacoma factory connector behind the rear bumper. This connector is pinned to a panel just behind the rear bumper on the passenger side.

How does a Toyota Tacoma camera work?

The Tacoma made installation easy because the license plate is on the bumper, and the taillight wiring is easy accessible from below. The camera ties into the vehicle's reverse lights. That allows it to switch on automatically when the driver puts the car in reverse.

How do you install a backup camera on a truck?

Grab the cable of your backup camera handle kit, feed it through the outside of the truck and secure it to the latch back. Secure the handle in place using the two 10mm bolts that you removed earlier. On the cord, there is a white wire loop. These control the parking guidelines.

Does a Tacoma have a backup camera?

Accordingly, all Tacoma audio systems now come with a 6.1-inch touch screen, where, incidentally, the view from the optional backup camera is now also displayed, rather than in the rear-view mirror as before.

How do I replace battery cables on a Toyota Tacoma?

The steps involved in replacing battery cables on a Toyota Tacoma are as follows: Disconnect the negative cable from the battery. Disconnect the positive cable from the battery. Remove any plastic covers or insulation from the cables. Loosen the bolts holding the cables in place. Remove the old cables.

This thin Black cable needs to be connected to a 12V power source from the Aftermarket radio harness. Usually Aftermarket Radio will give you a Blue with White line cable marked as AMP Control Cable which has (12V to 14V) while you have your key in ignition turned to ACC or ON. You need to tap this AMP Control Cable to the Black thin cable.
