What is a lithium ion battery?

"Liion" redirects here. Not to be confused with Lion. A lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li + ions into electronically conducting solids to store energy.

What is a lithium ion battery made of?

The anodes of most lithium-ion batteries are made from graphite. Typically, the mineral composition of the cathode is what changes, making the difference between battery chemistries. The cathode material typically contains lithium along with other minerals including nickel, manganese, cobalt, or iron.

Which battery chemistries use nickel?
