What is EMS Software & how does it work?

EMS software attempts to optimize the performance of the ESS by weighing long-term cycling and capacity degradation with the asset's return on investment. This involves knowing the BMS and PCS limitations and recognizing when the energy storage system can be used most effectively.

What is EMS & why is it important?

EMS plays a critical role in battery energy storage, ensuring the optimal operation and integration of the system within the larger power infrastructure. It facilitates the coordination of power flows, frequency regulation, and voltage support, enabling seamless integration with the grid.

What are the critical components of a battery energy storage system?

In more detail, let's look at the critical components of a battery energy storage system (BESS). The battery is a crucial component within the BESS; it stores the energy ready to be dispatched when needed. The battery comprises a fixed number of lithium cells wired in series and parallel within a frame to create a module.

What is strategic intelligence in EMS?

Strategic intelligence is a key aspect of modern EMS solutions. It involves optimizing the operation of the energy storage system based on various factors, including electricity prices, demand patterns, and system objectives.

What is the difference between ETB monitor and acumen EMS?

Energy Toolbase's Acumen EMS provides advanced system control capabilities, while ETB Monitor effectively serves as the user interface (UI) layer, providing robust monitoring capabilities. Project developers and host customers with Acumen EMS-controlled assets can use ETB Monitor to view real-time system performance and diagnose and resolve issues.

What type of batteries are used in stationary energy storage?

For this blog, we focus entirely on lithium-ion (Li-ion) based batteries, the most widely deployed type of batteries used in stationary energy storage applications today. The International Energy Agency (IEA) reported that lithium-ion batteries accounted for more than 90% of the global investment in battery energy storage in 2020 and 2021.
