Is energy storage device testing the same as battery testing?

Energy storage device testing is not the same as battery testing. There are, in fact, several devices that are able to convert chemical energy into electrical energy and store that energy, making it available when required.

What types of automated test equipment does EAG offer?

EAG has a variety of Automated Test Equipment (ATE) configurations for Advantest 93K, Teradyne UltraFlex, Teradyne J750, Teradyne IP750, Eagle ETS364, Eagle ETS88, Chroma 3650, Chroma 3680, and Credence Quartet. In our ATE systems, we perform RF testing up to 12GHz, and the power range is adjustable, reaching up to 500V for certain RF tests.

What are ATE systems used for?

ATE systems are frequently utilized in failure analysis, capable of identifying failing tests and using shmoo plots to pinpoint failures within specific operating ranges of voltage, frequency, and timing.

How do I choose the best cell and battery test equipment?

When you specify and purchase cell and battery test equipment for your R&D lab or production line, it is critical to have a thorough understanding of performance specifications. While it may be easy to state the price, the number of channels you need, and the current per channel, the accuracy of the equipment is the most critical specification.
