For example, a battery with 1 MW of power capacity and 4 MWh of usable energy capacity will have a storage duration of four hours. Cycle life/lifetime is the amount of time or cycles a battery storage system can provide regular charging and discharging before failure or significant degradation.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

How long can a battery last in an ESS?

However, even at 80% capacity, the battery can be used for 5-10 more years in ESSs (Figures 4.9 and 4.10). ESS = energy storage system, kW = kilowatt, MW = megawatt, UPS = uninterruptible power supply, W = watt.
