

Are battery energy storage systems safe?

Owners of energy storage need to be sure that they can deploy systems safely. Over a recent 18-month period ending in early 2020, over two dozen large-scale battery energy storage sites around the world had experienced failures that resulted in destructive fires. In total, more than 180 MWh were involved in the fires.

Can a battery energy storage system control electrical fires?

However, these systems may be used in the computer or control rooms of an ESS to control any electrical fires. Thermal runaway in lithium batteries results in an uncontrollable rise in temperature and propagation of extreme fire hazards within a battery energy storage system (BESS).

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Are alternative energy storage batteries a fire hazard?

During Fire Prevention Week, WSP fire experts are drawing attention to the rapid growth of alternative energy storage batteries and the need to address fire hazards. As part of the quest to decarbonize, energy utilities and electric power producers are rapidly increasing the proportion of energy generated with wind and solar resources.

Are large-scale battery energy storage systems preventing fires and explosions?

However, the rapid growth in large-scale battery energy storage systems (BESS) is occurring without adequate attention to preventing fires and explosions. That by the end of 2023, 10,000 megawatts (MW) of BESS will be energizing U.S. electric grids--10 times the cumulative capacity installed in 2019.

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.*Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

There are currently no national rules, advice or standards for how fire protection should be dimensioned or where battery energy storage systems can be installed in Sweden. This creates an uncertainty for those who want to install battery energy storage systems. The aim of this project is to produce national guidelines regarding fire safety of BESS

These battery energy storage systems usually incorporate large-scale lithium-ion battery installations to store energy for short periods. The systems are brought online during periods of low energy production and/or high demand. Their purpose is to increase the reliability of the grid and reduce the need for other drastic measures (such as rolling blackouts).

Furthermore, more recently the National Fire Protection Association of the US published its own standard for the "Installation of Stationary Energy Storage Systems", NFPA 855, which specifically references UL 9540A. The International Fire Code (IFC) published its most robust ESS safety requirements in the most recent 2021 edition.
