Container Solution: o ISO or similar form factor o Support module depopulation to customize power/energy ratings

rack cabinet configuration comprises several battery modules with a dedicated battery energy management system. Lithium-ion batteries are commonly used for energy storage; the main topologies are NMC (nickel manganese cobalt) and LFP (lithium iron phosphate). The battery type considered within this Reference

During battery module assembly, we take characterized cells and arrange them in series and/or parallel strings for optimum energy density and charging and discharging performance. Once this is complete, we continue the rest of the assembly process that includes: dispense, fastening, electrical testing, and leak testing.
