Energy storage is critical in distributed energy systems to decouple the time of energy production from the time of power use. By using energy storage, consumers deploying DER systems like rooftop solar can, for example, generate power when it's sunny out and deploy it later during the peak of energy demand in the evening.

Allye provides distributed energy storage at the grid edge working in partnership with electricity network to accelerate decarbonisation of the grid and help commercial and residential customers lower energy costs by up to 50%.
