In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6]. Fig. 1 shows the current global ...

Therefore, with the aim of maximizing expected profit, the retailer should determine the optimal selling price. It should be noted that the plug-in electric vehicles (PEVs) [2] and hydrogen storage systems (HSSs) [3] as energy storage systems can be used for more flexibility of energy management and to increase the profit of retailer.

Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. Some technologies provide short-term energy storage, while others can endure for much longer. Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped.

Latent heat storage (LHS) is characterized by a high volumetric thermal energy storage capacity compared to sensible heat storage (SHS). The use of LHS is found to be more competitive and attractive in many applications due to the reduction in the required storage volume [7], [8]. The use of LHS is advantageous in applications where the high volume and ...

One of the main challenges in using 2nd life batteries is determining and predicting the end of life. As it is done for the first life usage, the state of health (SoH) decrease for 2nd life batteries is also commonly fixed to 20%, leading to an end of life (EoL) capacity of 60% [12, 13].This EoL criterion is mainly driven by the start of non-linear ageing.
