

Electrochemical (batteries): Stores energy of chemical reactions, where electrical energy is converted to chemical energy and vice versa ; Currently, mechanical storage systems are the most common around the world. Aboveground pumped hydropower, for instance, currently accounts for 96% of all utility-scale energy storage in the United States.

Generation of energy is the process of harvesting energy from a particular source, energy storage involves the system used to contain the harvested energy, and the stored energy is then sent to its final destination to be used and conserved in a multitude of different applications.
