What do we expect in the energy storage industry this year?

This report highlights the most noteworthy developments we expect in the energy storage industry this year. Prices: Both lithium-ion battery pack and energy storage system prices are expected to fall again in 2024.

Can stationary energy storage improve grid reliability?

Although once considered the missing link for high levels of grid-tied renewable electricity, stationary energy storage is no longer seen as a barrier, but rather a real opportunity to identify the most cost-effective technologies for increasing grid reliability, resilience, and demand management.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Which long-duration energy storage technologies have a critical year ahead?

Beyond lithium-ion batteries, other long-duration energy storage (LDES) technologies have a critical year ahead. China has forged ahead with its LDES development and will remain the frontrunner this year, even as US, UK, Australia and other markets support LDES growth.

Where can I find information about energy storage research products?

You can visit the website of CNESA, www.esresearch.com.cn, to learn more about research products on energy storage industry. Please contact CNESA if you have any questions:

How will battery overproduction and overcapacity affect the energy storage industry?

Battery overproduction and overcapacity will shape market dynamics of the energy storage sector in 2024, pressuring prices and providing headwinds for stationary energy storage deployments. This report highlights the most noteworthy developments we expect in the energy storage industry this year.

The Energy Storage Summit USA will return to Austin in March, taking place at a new and improved venue for 2024. The US remains at the center of the global energy storage industry, with California having surpassed 5GW of grid-scale energy storage installations this year, ERCOT going from strength to strength and new markets across the country opening up.
