Figure 4a shows that the output power of the super-capacitor and battery change with the light intensity changes. At t = 0.3 s, the output active power highest point of super-capacitor is about 2 kW under FT (IBS) control, while the highest point is about 4 kW under FT (PI) control; At t = 0.5 s, the output active power lowest point of super-capacitor drops to ...

A standalone hybrid photovoltaic- (PV-) wave energy conversion system with energy storage is proposed and it has been found that the overall hybrid framework is capable of working under the variable weather and load conditions. Today, the whole world faces a great challenge to overcome the environmental problems related to global energy production. Most ...

The power take-off (PTO) level power smoothing in the wave energy converter (WEC) is needed to reduce its power variations and optimize the generator and associated converter sizing.

In this paper, we introduced an intermittent wave energy generator (IWEG) system with hydraulic power take-off (PTO) including accumulator storage parts. To convert ...

Wave energy converter (WEC) harvests the potential and kinetic energy of a wave into usable electricity or mechanical energy. Capacity factor is a critical performance metric, measuring power production performance for a given WEC technology, location and sea condition [5]. The performance of the power take-off (PTO) component, a key component of the WEC, ...

This study proposes a novel control strategy for a hybrid energy storage system (HESS), as a part of the grid-independent hybrid renewable energy system (HRES) which comprises diverse renewable energy resources ...

Wave energy is a renewable energy with a high density. There are different types of wave power generation systems (WPGSs), including Archimedes wave swing (AWS) coupled to a linear permanent magnet synchronous generator. This study proposes a model predictive control (MPC) for AWS-based WPGS.

So far, research on the hybrid energy storage system (HESS) in grid-connected systems mainly focuses on power allocation (Ise et al., 2005, Nunez Forestieri and Farasat, 2020, Xin et al., 2021, Zhang et al., 2021a, Zhou and Sun, 2014) Ise et al. (2005), a low-pass filter and a high-pass filter were used to allocate the power of the railway.. Then, a fuzzy controller is ...

Large-scale integration of renewable energy in China has had a major impact on the balance of supply and demand in the power system. It is crucial to integrate energy storage devices within wind power and photovoltaic (PV) stations to effectively manage the impact of large-scale renewable energy generation on power balance and grid reliability.

In order to simplify the structure of the wave energy power generation system, reduce the design and manufacturing costs and improve the stability of the output to satisfy the grid-connection control requirements of wave energy power generation, a wave energy conversion device is designed, which is convenient to maintenance and replacement, and ...

The linear permanent magnet generator (LPMG)-based direct drive wave energy conversion system (DDWECS) works under perpetual fluctuations of ocean waves. Short-term energy storage, such as ...

The increased usage of renewable energy sources (RESs) and the intermittent nature of the power they provide lead to several issues related to stability, reliability, and power quality. In such instances, energy storage systems (ESSs) offer a promising solution to such related RES issues. Hence, several ESS techniques were proposed in the literature to solve ...

The hydraulic energy-storage devices are more stable, which realize the decoupling of the front-end energy capture stage and back-end generation stage, simplify the system control strategy and improve the output power quality [3].

In order to effectively mitigate the issue of frequent fluctuations in the output power of a PV system, this paper proposes a working mode for PV and energy storage battery integration. To address maximum power point tracking of PV cells, a fuzzy control-based tracking strategy is adopted. The principles and corresponding mathematical models are analyzed for ...

With the innovation of battery technology, large-capacity centralized energy storage power stations continue to be used as power sources to provide energy support for the grid [5 - 7], which are included in the grid-connected operation and auxiliary service management.Li et al. [8, 9] concluded that the main functions of the energy storage power ...

Wave energy collected by the power take-off system of a Wave Energy Converter (WEC) is highly fluctuating due to the wave characteristics. Therefore, an energy storage system is generally needed to absorb the energy fluctuation to provide a smooth electrical energy generation. This paper focuses on the design optimization of a Hydraulic Energy ...
