This standard also does not deal with the insulation of metal surfaces, which are protected on their inner surface, with refractory brickwork or other refractory linings, the temperatures of which change, with the application of external insulation. Thus, this standard covers external insulation of surfaces such as vessels or piping carrying

standard spacings of wall studs and attic or floor joists. They must be hand-cut and trimmed to fit wherever the joist spacing is non-standard (such as near windows, doors, or corners), or where there are obstructions in the walls (such as wires, electrical outlet boxes, or pipes). Batts can be installed by homeowners or professionals.
