However, the ...

Due to high power density, fast charge/discharge speed, and high reliability, dielectric capacitors are widely used in pulsed power systems and power electronic systems. However, compared with other energy storage devices such as batteries and supercapacitors, the energy storage density of dielectric capacitors is low, which results in the huge system volume when applied in pulse ...

The research and development of new energy storage aggregates is important for solving the ITZ problem of energy storage concrete. New energy storage aggregates that can improve the ITZ interface are acceptable, even if their addition results in low-strength energy storage concrete because the strength can be improved by adding fibres.

In contrast to other energy storage devices like lithium-ion batteries, dielectric capacitors, as passive component energy storage devices, offer distinct advantages such as ultra-fast charging and discharging rates, extremely high power density, high working voltage, low cost, and exceptional durability.

A selection of thermal insulation materials that can be applied on the storage outside wall is presented in Table 1, along with their most relevant thermophysical properties. The selection was made on the basis of commercially available materials with maximum service temperatures adequate for thermal energy storage in the range 60 - 90 &#176;C.

The index  $W_{et}$  is calculated as the ratio of the elastic strain energy density to dissipated strain energy density at the stress level of 80-90% of the peak strength of rock specimen, and the corresponding unloading test needs to conduct (Note: For ease of calculation, strain energy density is used instead of strain energy in this paper). 26 In fact, the indoor rock ...
