What is Enphase Energy microinverter system?

Its polymeric enclosure and revolutionary cabling system simplify installation. The Enphase Energy Microinverter System improves energy harvest, increases reliability, and dramatically simplifies the design, installation, and management of solar power systems.

Which solar panels are compatible with Enphase Energy Micro-inverters?

These PV solar systems feature Enphase Energy micro-inverters that are matched with a variety of compatible solar panels from the best selling brands. These systems have all the required components for a grid-tied micro-inverter array. Choose the M215 or the M250 micro-inverter, delivering 215 AC watts and 250 AC watts respectively.

Why are Enphase micro-inverters installed on each solar panel?

Because of the less than ideal orientation of the solar panels I decided to have Enphase micro-inverters installed on each panel so that each panel operated at the optimum output independently of shading etc of other panels in the system unlike systems where panels are installed in a "string"

What are the limitations of Enphase microinverters?

The only significant limitation of Enphase Microinverters is in regard to battery storage. Microinverters aren't compatible with the majority of solar batteries as they are DC coupled, this is because of microinverters output AC power.

Are Enphase mini-inverters a good choice?

The Enphase mini-inverters can deliver up to 25% more power than conventional inverter systems. They are ideal for areas where shading may be an issue affecting performance. Plus with a 25 year warranty, the Enphase inverters are guaranteed to last as long as the solar panels.

What is included in a Enphase micro-inverter kit?

These solar kits also include Enphase accessories like the inverter trunk cables, termination caps, wire clips, AC disconnect safety switch box and the Enlighten Envoy lifetime monitoring package. FreeCleanSolar has the lowest cost Enphase micro-inverter systems available now.

With an Enphase Energy System, every solar panel is equipped with its own microinverter, so if one panel slips into the shade or experiences a rare glitch, the other panels keep generating power. That's in stark contrast to traditional string inverter systems, where if one panel goes down, the whole system can go down with it.
