

Generac generator how does it work

What is a Generac generator?

A Generac generator is a standby generator that automatically supplies electricity to your home or business in case of a power outage. These generators are designed to provide a seamless and continuous power supply, ensuring that you don't experience any disruptions during blackouts. But how does a Generac generator achieve this remarkable feat?

How does a Generac home backup generator work?

After utility power returns, the generator shuts itself off and waits for the next outage. It operates on natural gas or liquid propane gas and sits outside just like a central air conditioning unit. Your Generac home backup generator runs on your existing natural gas or LP fuel supply. Save the gas cans for your other outdoor power equipment.

How does a Generac home standby system work?

Thanks to the transfer switch technology, your backup generator can start supplying power to your home seconds after an outage begins. Whether you're home or not, your Generac home standby system kicks into action, and continues to power your home until utility power returns.

Did Generac home backup generator keep family warm during an ice storm?
