So, as a new kind of energy storage technology, gravity energy storage system (GESS) emerges as a more reliable and better performance system. GESS has high energy storage potential and can be seen as the need of future for storing energy. Figure 1:Renewable power capacity growth [4]. However, GESS is still in its initial stage. There are

The storage state ( $S_L(t)$ ), at a particular time  $t$ , is the sum of the existing storage level ( $S_L(t-1)$ ) and the energy added to the storage at that time ( $E_S(t)$ ); minus the storage self-discharge,  $d$ , at  $(t-1)$  and the storage discharged energy ( $E_D(t)$ ), at time  $t$ . Energy losses due to self-discharge and energy efficiency ( $i$ ) are also taken ...
