How far can an electric motorcycle go on a single charge?

The range of an electric motorcycle depends largely on the model, battery size, and riding conditions. As of 2023, most electric motorcycles offer ranges between 70 to 150 miles on a single charge under typical riding conditions. However, high-end models and those with additional battery packs can exceed these ranges.

Are electric motorcycles any good?

However, electric motorcycles also have limitations. The most notable are range and charging time. As of now, even the best electric motorcycles can't match the range of a gas-powered bike, and recharging the battery takes longer than refilling a gas tank.

How much power does an electric bike need?

As the weight of the bike increases, so does the necessary battery size. For instance, lighter electric motorcycles with smaller batteries require approximately 400-500 watt-hours of electricity to charge fully. On the other hand, heavier e-bikes with larger batteries require 500-800 watt-hours.

What should I consider when buying an electric motorcycle?

This includes maintaining a moderate temperature (extreme cold or heat can harm the battery), avoiding keeping the battery at 100% charge for prolonged periods, and avoiding complete discharges. When buying your first electric motorcycle, consider your needs and priorities. What's your budget? What kind of riding will you be doing?

How do electric motorcycles work?

The electric motor converts electrical energy from the battery into mechanical energy, which propels the motorcycle forward. The controller acts as the intermediary, managing the flow of electricity from the battery to the motor. There's a diverse range of electric motorcycles on the market, including sport, commuter, off-road, and touring models.

How do you calculate the range of an electric motorcycle?

Then to get estimated range, you would need to take the total capacity of the vehicle and divide by the efficiency to get an estimated total range of the vehicle. For e.g. if the electric motorcycle has a 10 kWh battery, or 10,000 Wh, divided by 30 Wh/km gives you a total of 333.3 km of total range, or 208 miles.
