What are the different types of Tesla batteries?

The different Tesla batteries feature cathodes with varying material makeups. The 18650-type battery is a Nickel-Cobalt-Aluminum (NCA) lithium-ion battery, meaning that these are the materials used to produce its cathodes. The 2170-type battery is either a NCA or a Nickel-Cobalt-Manganese (NCM) battery, depending on where it is manufactured.

Does Tesla worry about lithium supply?

When asked if he worries about lithium supply, Tesla CTO JB Straubel once said that he worries more about cobalt, which is used in the cathode of Tesla's battery cells. The resource is more problematic since the bulk of it overall supply has historically come from the conflict-prone Congo, but new sources are being explored in North America.
