

How to read energy bill with solar panels

Do you have an electric bill with solar?

But now your electric bill with solar is looking a little bit different and you're confused. No big deal - there's just a few things to remember. Solar can reduce or eliminate your electricity costs, but you still have an electric bill with solar panels, even if you don't owe anything.

How do I calculate my monthly electricity bill?

To calculate your monthly bill, subtract the value of your exports from the cost of the imports, as shown below: \$22 for grid imports - \$82 for solar exports = -\$60 electricity bill. So instead of a \$44 electric bill before solar panels, you now have a -\$60 bill with solar panels -- a \$104 swing.

How do solar panels affect my electric bill?

Every month you'll be sent a bill showing the net value of your usage. The net value is the amount of energy you purchase from the grid subtracted by the amount of energy you sell back to the grid. The main difference you'll notice with your electric bill after you install solar panels is the much lower bill you owe.

Do I still get a monthly Solar Bill?

Use this guide to learn how to read your statements and ways you can use the information on your bill to make the most of your new solar-generating system. Why Do I Still Get a Monthly Bill? Even though you're now generating your own solar energy, you still receive a bill each month for your energy charges.

What is a solar Bill vs electricity bill?

Solar systems can be - and often are - designed to produce 100% of household electricity consumption and essentially replace your utility electric bill with a lower, more stable payment on the solar system. At this point, it's important to distinguish between a solar bill vs electricity bill.

What is a monthly electric bill?

Monthly electric bill = Cost of grid electricity imports - value of solar exports. So, let's say you have 1:1 net metering, a solar system sized to produce 100% of your average electricity consumption, and a utility rate of 17 cents per kWh. For the month of June, your consumption and production might look something like the graphic below:

Average daily solar export - If you have roof top solar, you'll see the average amount of solar energy export you send out to the grid each day for this billing period. Same time last year - The average solar energy export you sent out to the grid each day for the same time last year.
