What is a grid-tied solar system?

Grid-tied solar systems are generally connected to the main electricity grid and solar panel array. They require specialized equipment, like a grid-tied inverter (GTI) or micro-inverter. Some homeowners also replace their current power meter with a compatible net metering.

Why are grid-tied solar panels so popular?

Grid-tied solar panel systems are so popular because they provide the best value for how much they cost, especially in areas with full-retail net metering. Their cost is low because they require less equipment than other solar system types. However, this also means grid-tied systems can't keep your lights on when the power is out.
