On December 14, 2021, The Climate Investment Funds (CIF), through its Global Energy Storage Program (GESp), hosted a virtual workshop focused on the transformational potential of energy storage. The third workshop in a series, "Keeping the Power On: Financing Energy Storage Solutions" hosted over 150 participants from 39 countries and cities across the world.

The application analysis reveals that battery energy storage is the most cost-effective choice for durations of  $\leq 2$  h, while thermal energy storage is competitive for durations ...

Most TEA starts by developing a cost model. In general, the life cycle cost (LCC) of an energy storage system includes the total capital cost (TCC), the replacement cost, the fixed and variable O& M costs, as well as the end-of-life cost [5]. To structure the total capital cost (TCC), most models decompose ESSs into three main components, namely, power conversion ...
