How is the power profile of the hybrid energy storage PHESS (k) calculated?

The power profile of the hybrid energy storage PHESS (k) is derived from a simulation with the vehicle model and the ECMS high-level controller detailed in Section 2. Once the battery power has been determined, the current (Eq. (44)) and the severity factor (Eq. (45)) can be evaluated in order to calculate the equivalent cost.

What are hybrid energy storage systems?
