ESS having limited capacity in terms of both power and energy can be categorized on the basis of their response; rapid response ESS like flywheel, ultra-capacitors and li-ion batteries are called short-term while chemical battery (lead acid), pumped hydro storage and compressed air are known as long-term ESS.

While batteries and capacitors are both energy storage devices, they differ in some key aspects. A capacitor utilizes an electric field to store its potential energy, while a battery stores its energy in chemical form. Battery technology offers higher energy densities, allowing them to store more energy per unit weight than capacitors.
