How can Iraq address its current electricity shortfall & growing power needs?

BAGHDAD - Iraq, one of the world's biggest energy producers, can address its current electricity shortfall and growing power needs through immediate action to relieve pressure on the system, according to an in-depth report published Thursday by the International Energy Agency.

How has war affected Iraq's power infrastructure?

Despite the extraordinary challenges of war in recent years, Iraq has made impressive gains, nearly doubling the country's oil production over the past decade. But the turmoil has also undermined the country's ability to maintain and invest in its power infrastructure.

Can a green hydrogen-based energy system help Iraq achieve sustainable economic resilience?

The study investigates the potential of transitioning Iraq, a nation significantly dependent on fossil fuels, toward a green hydrogen-based energy system as a pathway to achieving sustainable economic resilience. As of 2022, Iraqi energy supply is over 90% reliant on hydrocarbons, which also account for 95% of the country's foreign exchange earnings.

What is Iraq's projected hydrogen energy demand?

Figure 9 represents Iraqi projected hydrogen energy demand for the country using two model equations labelled as equations (1), (2). According to the simulated results, Iraq's projected hydrogen energy demand shows a progressive increase over time. In 2025, the projected demand stands at 3.39 million tonnes per year.

Will Iraq's oil production increase if water availability increases?

One impeding barrier is the availability of water, as planned oil production will require a level of water production above what has been achieved so far. Assuming an increase in water availability, Iraq's production to 2030 grows by around 1.3 mb/d, making it the third largest contributor to global oil supply in that time.

Iraq's access to the grid network has increased in recent years. Many rural areas in Iraq, especially in the southern part, have limited access to the electricity grid. Thus, applying other optional energy sources, such as photovoltaic panels, wind turbines, and diesel generators, could help provide the electricity needs in such areas.
