Applies to: Windows Server 2016 Original KB number: 4043839. Symptoms. After you change the power policy for a Windows Server 2016-based server, you receive event ID 37 in the System log: Event ID 37 Source: Microsoft-Windows-Kernel-Processor-Power Type: Warning Description: The speed of processorxin group y is being limited by system firmware.

Also, my computer crashed again while playing Battlefield 1. I checked the report log and I noticed that a few things were different than the one I originally submitted, specifically the PowerButtonTimestamp and the BootAppStatus. Does this mean anything or is it still most likely the PSU? System - Provider [Name] Microsoft-Windows-Kernel-Power

Hi and thanks for reaching out. My name is William, I"m an Independent Advisor. I"ll be happy to help you out today. The event "The kernel power manager has initiated a shutdown transition." is expected. This simply indicates the computer has entered into a shutdown phase, usually a result of pressing the power button.

This post offers the most suitable solution to this issue. The symptoms are that your computer restarts and a critical error message is logged in the event log: Log Name: System Source:...
