How much does a microinverter cost?

Microinverters typically cost a couple of hundred dollars per unit. While they offer many advantages, which we will cover further, microinverters are notably costlier than string inverters when installed on an entire solar power system. Check out this video from Enphase to learn more about microinverters and their benefits.

Do solar panels need micro-inverters?

Solar panels get all the glory, but it's the micro-inverters that do all the work, unlike the conventional inverters, micro-inverters provide flexibility and optimization for your photovoltaic system.

What are solar microinverters?

Microinverters are small electronic devices that convert direct current (DC) into alternating current (AC). One microinverter could fit the palm of your hand. The main factor differentiating microinverters from traditional inverters is that they operate at the panel level rather than the solar panel system as a whole.

How many solar panels can a microinverter handle?

Microinverters are typically designed to handle one solar panel each. For context, a 24-solar-panel system would need 24 microinverters. However, nowadays, some manufacturers are producing quad microinverters capable of connecting to four solar panels.

Where is a microinverter installed on a solar panel?

The microinverter installation occurs on each panel. Some may be factory installed or physically installed on-site, and there is no central inverter on a solar array with microinverters. The energy conversion occurs at the micro-inverter--on the roof at each solar panel.

How many solar panels can a quad microinverter connect?

However, nowadays, some manufacturers are producing quad microinverters capable of connecting to four solar panels. With the introduction of quad microinverters, one could potentially utilise six microinverters to connect 24 solar panels, depending on the specific model and manufacturer.

Microinverters are significantly more expensive than string inverters when you start thinking about them on a whole-system basis. If a solar panel system comprising 12 panels had a string inverter, it would cost around \$1,400, whereas if it had a microinverter on each individual panel this would cost closer to \$2,100.

To determine their cost, the best approach is to compare the cost per kilowatt of a typical inverter to the cost of microinverters for a similarly sized solar panel system. The price of micro inverters is \$1.15 per Watt as compared to \$0.75 per watt for central inverters.
