The Concept of Mobile Energy Storage System . Recently, there has been an increased interest in mobile energy storage systems (MESS), which are devices whose primary function is to serve as portable distributed energy resources. These devices are required due to the rise in peak demand prices and the numerous reasons for outages.

For example, mobile storage is often the preferred solution for utility operators to meet rising power demands. Battery energy storage is also used by operators to supplement grid power for up to three years before committing to fixed infrastructure investments. Mobile energy storage for land and sea.
