

Order of planets by size

This illustration shows the approximate sizes of the planets relative to each other. Outward from the Sun, the planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune, followed by the dwarf planet Pluto.

Order of the planets by size (smallest to largest) If you were to order the planets by size from smallest to largest they would be Mercury, Mars, Venus, Earth, Neptune, Uranus,...

When it comes to their measurable sizes in diameter, the planets vary greatly. Jupiter, for example, is approximately 11 times the diameter of the Earth. Mercury, on the other hand, is 2.6 times smaller in diameter than the Earth. Below you will find a list of the planet's mean diameters from largest to smallest.

The most common way to order the planets is by their distance from the sun. Using this method, the planets are listed in the following order: Contents. Planets in Order From the Sun. How to Remember the Order of the Planets. You Can Order the Planets in Other Ways. The Planets in Order by Size. Planets With the Most Moons.

According to NASA, this is the estimated radii of the eight planets in our solar system, in order of size. We also have included the radii sizes relative to Earth to help you picture them...
