

Considering the peak-flat-valley electricity price, the operation strategy is then optimized and the equivalent levelized cost of electricity is reduced by 14.3%. ... Tao Y, Hao B, Chen X, Chen H, Shi J. Optimal capacity design for solar combined cooling heating and power system with energy storage. In: 2018 2nd IEEE Conference on Energy ...

The results show that the molten salt heat storage auxiliary peak shaving system improves the flexibility of coal-fired units and can effectively regulate unit output; The combination of high-temperature molten salt and low-temperature molten salt heat storage effectively overcomes the problem of limited working temperature of a single type of ...

The aim of this paper is using EMS to peak-shave and valley-fill the electricity demand profiles and achieve minimum peak-to-valley ratio in HRB. In this aim, control ...

As is shown in Fig. 6, which is typical daily load curve of all day power consumption type in each period, it can be seen that in heating period, power consumption is from 15:00 to 7:30 which is peak and valley section; in initial heating period, power consumption is from 21:00 to 7:00 which is in valley section, supplementary power consumption ...

Therefore, the load power can be divided into four types: sharp peak and sharp valley, sharp peak and flat valley, flat peak and sharp valley, flat peak and flat valley. ... Hu, H.T., et al.: A novel, "source-network-train-storage" integrated power supply system for electric railways. Proc. CSEE 06(08), 1-18 (2021). (in Chinese)

The off-peak power is firstly converted into thermal energy using an electric heater and, then, stored in a high temperature sensible heat storage. When the power demand is high, using a modified ...

is in the peak and valley period Determine the optimal threshold for time division Determine the threshold arbitrarily in the interval [0,1] Each set of thresholds determines a set of peak-flat-valley period divisions and P, V, M Determine the optimal peak-flat-valley period division threshold Not optimal Fig. 1. Peak and valley time division steps

Sections where storage is below the minimum threshold are peak periods, and those where user steam usage is less than the supply are valley periods, and other times are the flat periods:  $(16) t \in \{T_p | L(t) > Q_{supply} \text{ or } Q_{storage}(t) < Q_{storage, min} \text{ or } T_v | L(t) \leq Q_{supply} \text{ and } T_{flat}\}$  Where  $T_p$  is the peak period,  $T_v$  is the valley period,  $T_{flat}$  is the flat period ...

System description. This paper proposes a distributed heating peak shaving system (DHPS), which integrates

indirect solar flat plate collectors, electric thermal storage tank (ETST) and AHP, is ...

In recent years, with the rapid development of the social economy, the gap between the maximum and minimum power requirements in a power grid is growing [1]. To balance the peak-valley (off-peak) difference of the load in the system, the power system peak load regulation is utilized through adjustment of the output power and operating states of power ...

Wind power generation has increased in China to achieve the target of decreasing CO<sub>2</sub> emissions by 2050, but there are high levels of wind curtailment due to the mismatch between electricity supply and demand. This paper proposes a single-stage air source heat pump coupled with thermal storage for building heating purposes. The main objective is to ...

Combined with off-peak electric heat storage, the power generation during the peak time by the LAES system can be significantly increased, and the economy of the LAES system can be effectively ...

Unlike most energy storage systems such as battery and PHS, CAES is inherently capable of co-generation and co-storage of heat and power, which enables CAES to serve as energy hub (EH) ... Considering that the time ...

The TOU tariff in China includes peak-valley pricing and seasonal pricing mechanisms. Peak-valley pricing divides each day into peak, shoulder, and off-peak time windows (some provinces also set critical peak and deep valley time windows), while seasonal pricing adjusts time windows by seasonal load variations.

The results show the significant peak shaving and valley filling potential of EMS which contributes to 3.75% and 7.32% peak-to-valley ratio reduction in demand and net demand profiles, respectively. In the future, the penetration of smart household appliances in Chinese household will increase due to the improving living standard.

HP-PCM hybrid prototype with high energy storage density and heating power. ... and 0.344 CNY&#183;kWh<sup>-1</sup> for peak periods (10:00~15:00 and 18:00~21:00), flat periods (7:00~10:00, 15:00~18:00 and 21:00 ... Fig. 9 displays the trend of operational cost ratio at different electrovalence ratios of peak to valley and the specific values of ...

The energy consumption of urban central heating in northern China is two to four times that in northern Europe and other countries. Beijing has adopted measures, such as "coal to gas" and "coal to electricity", to reduce environmental pollution caused by central heating. Given a peak-to-valley difference in the electricity supply of power plant, which is uneven day and night, ...

This policy mainly divides the entire day into peak, flat, and valley periods, reduces the valley price, and increases the peak price to encourage electricity users to use more valley power to maintain grid stability. Bindels et al. investigated the use of heat pumps in membrane distillation by building a simulation model and

using nonlinear ...

Table 1 is equipment parameters, and Table 2 is peak-valley flat electricity price parameters. ... cooling, heating, and power) integrated with internal combustion engine, gas boiler, heat ...

The geothermal heating system coupled with energy storage can have a good performance when the peak-valley electricity price difference is higher than CNY 0.566/kW $\cdot$ h (USD 0.0847/kW $\cdot$ h)+ or the ...

In this study, by adding a high temperature heat storage device in the cold (hot) section of the reheating pipeline and taking the 300MW extraction steam turbine as the ...

Abstract: In order to make the energy storage system achieve the expected peak-shaving and valley-filling effect, an energy-storage peak-shaving scheduling strategy considering the ...

Minimizing the load peak-to-valley difference after energy storage peak shaving and valley-filling is an objective of the NLMOP model, and it meets the stability requirements of the power system. The model can overcome the shortcomings of the existing research that focuses on the economic goals of configuration and hourly scheduling.
