Does a lithium ion battery drain a smartphone battery?

It's true that lithium-ion batteries diminish in capacity with every charge cycle, but this effect is quite small. While not quite draining and filling up your smartphone battery can have marginal benefits, it's unlikely to have a notable effect on your smartphone's battery capacity unless you keep the phone for many years.

What is a lithium ion polymer battery?

Lithium-ion polymer batteries, also known as lithium-polymer, or li-po for short, are awesome little pouches of energy that power our beloved smartphones, laptops, and tablets. Any portable gadget that requires lots of continuous power probably has a li-po battery as its heart.

Are lithium ion batteries rechargeable?

Before the lithium-ion battery became ubiquitous, the nickel metal hydride battery was the rechargeable battery of choice. In those batteries, it was impossible to get an accurate reading of the battery charge level without fully discharging and then recharging the battery. "If they were half discharged and recharged, you'd lose where you were.

Should you charge your phone with lithium ion?

But lithium-ion is a different ballgame. It doesn't forget and can retain a working charge across the entire battery. In fact, discharging your battery to 0% lowers its voltage and places some additional strain on the battery when recharging. You shouldn't let your phone's battery drop below 20%.

What are lithium ion batteries made of?

The guts of most lithium-ion batteries, like the ones in smartphones, laptops, and electric cars, are made of two layers: one made of lithium cobalt oxide and the other of graphite. Energy is released when lithium ions move from the graphite layer to the lithium cobalt oxide layer.

Is lithium a good battery?

Lithium is in our phones and tablets, our laptops and smartwatches. It's in our e-cigarettes and our electric cars. It is light, soft and energy dense, which makes it perfect for portable electronics. But, as consumer technology has grown more powerful, lithium-ion batteries have struggled to keep up.
