However, the solar PV cell has some sorts of disadvantages the installation cost is expensive (Duffie and Beckman 2006). At present situation effectiveness of solar cells is less compared with alternative sources of energy. Solar energy is not available for 24 h, so there is a requirement for energy storage which makes the overall setup expensive.

As researchers keep developing photovoltaic cells, the world will have newer and better solar cells. Most solar cells can be divided into three different types: crystalline silicon solar cells, thin-film solar cells, and third-generation solar cells. The crystalline silicon solar cell is first-generation technology and entered the world in 1954.
