What is a portable power station?

Portable power stations are basically large batteries in protective boxes, with AC outlets and other charging ports built in. They're generally much bigger, heavier, more powerful, and more rugged than power banks and portable laptop chargers.

What is the best portable power station for backup?

Anker Solix F1200 (1,229Wh): This unit was previously known as the PowerHouse 757 from Anker, and was also CNET's previous pick for " best portable power station for backup." Its UPS mode was one of the earlier units to boast " less than 20ms" switchover time in the event of a power outage. It's also currently \$500 off on Anker's site.

How to choose a portable power station?

When selecting a portable power station, consider your needs. For small devices like headphones and smartphones, a compact portable power station of around 100Wh is sufficient, similar to a big power bank. However, for larger devices such as refrigerators or TVs, opt for a more heavy-duty option with 500Wh or more.
