Yes, the Powerwall 2 will control a fancy switch that cuts off grid power when it doesn't detect current. It will then turn on it's inverter and energize the house. Your micro inverters will detect that power is back online and start doing their thing. If there's a surplus of power, the battery will charge from the AC your solar sends out.

The company is constantly exploring compatibility with different inverter manufacturers. The Powerwall 2 is an AC battery, so it requires a separate solar inverter to function with a solar array. All current solar inverters mesh well with the Tesla Powerwall. If there's a blackout, the battery continues to work in what is called island mode.

Powerwall can be integrated with a new or existing solar system. Since Powerwall is an AC coupled solution, it is compatible with all inverter types. To ensure reliable operation during power outages, at least one Powerwall is required for each 7.6 kW AC of solar included in the backup circuit. Powerwall & Other Renewable Energy Sources. If ...
