

Renewable energy law sb 100

Senate Bill (SB) 100 established a landmark policy requiring renewable energy and zero-carbon resources supply 100 percent of electric retail sales to end-use customers by 2045. It requires the California Energy Commission (CEC), California Public Utilities Commission (CPUC), and California Air Resources Board (CARB) to prepare a report to the ...

With the Governor's signing of Senate Bill 100, California becomes the first large state to set a 100 percent clean electricity target. The new law requires California's utilities to drive the state's energy grid to 100 percent clean power by 2045.

SB 100 is the legislative brainchild of California Senator Kevin de León to accelerate renewable energy adoption by instating new, more aggressive, standards. This bill also replaces SB 315, passed in 2015, which set a renewable target of 50% by 2030.

SB 100 would accelerate the state's primary renewable energy program--the Renewables Portfolio Standard (RPS)--which was created to reduce our reliance on fossil fuels and improve air quality. Right now, much attention is focused on ...

The report is the initial analysis called for in Senate Bill 100 (SB 100, De León, Chapter 312, Statutes of 2018), the state's landmark policy requiring that renewable and zero-carbon energy resources supply 100 percent of electric retail sales to customers by 2045.

This bill would state that it is the policy of the state that eligible renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all state agencies by December 31, 2045.

SB 100 would accelerate the state's current RPS program to 50% by 2025 and 60% by 2030. In addition, SB 100 sets a 100% clean, zero carbon, and renewable energy policy for California's electricity system by 2045.

SB 100 advances the state's existing Renewables Portfolio Standard, which establishes how much of the electricity system should be powered from renewable energy resources, to 50 percent by 2025 and 60 percent by 2030. It also puts California on the bold path to implement a zero-carbon electricity grid by 2045.
