What is concentrated solar power (CSP) & thermal energy storage (TES)?

Concentrated solar power (CSP) is a promising technology to generate electricity from solar energy. Thermal energy storage (TES) is a crucial element in CSP plants for storing surplus heat from the solar field and utilizing it when needed.

What is thermal energy storage?

Thermal energy storage (TES) refers to heat that is stored for later use--either to generate electricity on demand or for use in industrial processes. Power cycles are used in CSP thermal energy plants to convert heat into electricity using sunlight to generate the heat to power a turbine.

Can energy storage systems be used to generate electricity from solar energy?

To overcome this issue, researchers studied the feasibility of adding energy storage systems to this power plant [15,16]. Concentrated solar power (CSP) is a promising technology to generate electricity from solar energy.

Can thermal energy storage be used in solar power plants?

Thermal energy storage (TES) with phase change materials (PCM) in solar power plants (CSP). Concept and plant performance C.S. Turchi, M.J. Wagner, and C.F. Kutscher, "Water use in parabolic trough power plants: summary results from WorleyParsons' analyses," 2010. [Online].

How is solar energy stored in the TES?

The power generation from the PV and wind systems is recovered by an electric heating mechanism to warm the solar salt in the TES as soon as they start operating. The thermal energy from the CSP system and the electric heating device generated by the power rejection of the PV and wind systems are both stored in the TES.
