

The Storage or elastic modulus G' and the Loss or viscous modulus G'' The storage modulus gives information about the amount of structure present in a material. It represents the energy stored in the elastic structure of the sample. If it is higher than the loss modulus the material can be regarded as mainly elastic, i.e. the phase shift is ...

The 2010s started off with Jenkins et al. (2012) developing a new laboratory testing procedure for mix design for both asphalt foam and asphalt emulsion FDR mixtures [] at the University of Stellenbosch. This revolved around four procedures: vibratory hammer compaction, proper curing procedures, MIST conditioning for moisture damage, and simple ...

The resilient modulus of FBS materials is generally lower than that of hot mix asphalt (Loizos 2006), but can reach the resilient modulus of cement and lime treated materials (Sakr and Manke 1999). FBS materials are moisture sensitive and a reduction of resilient modulus between 30% and 50% have been reported when the specimen was soaked (Sakr ...

This paper investigates laboratory test methods for resilient modulus of foamed asphalt mixes. By comparing test results from different laboratory test methods, the effects of various stress states are identified. The indirect tensile resilient modulus test and the free-free resonant column test were found to yield stress states irrelevant to ...

shows the dynamic modulus master curves of the cold recycled foamed asphalt mixtures. All the mixtures followed the time-temperature superposition principle for linear viscoelastic materials: a ...

Foamed warm-mix asphalt (WMA) produced by water injection has been gradually accepted and used. However, several key concerns should be answered such as whether the water exists in asphalt after ...

The use of foamed cold-mix asphalt (FCMA) can potentially save energy and fuel consumption and reduce greenhouse gas emission. ... some healing occurred since there was no significant reduction of ITSM value from 7 to 9 after an over night storage. It was clear that after the series of tests with

deformation up to 25 mm, the specimen ...

Additionally, the performance of the foamed asphalt with different foaming water content has been evaluated and the results showed that with the increase of foaming water content, the sensitivities of the storage modulus and loss modulus for the foamed asphalt binder with CR decrease gradually (Yu et al., 2014).

The resilient modulus of the foamed asphalt mix was found to be between 1.9 and 5.4 times that of the virgin aggregate depending on density level and bulk stress, indicating ...

The storage modulus G' from the data and the SGR model match each other well even up to $\omega/G' \sim 1$ where we cannot expect good agreement. This promising behavior also gives us the interpretation that mechanistically the cytoskeleton possesses a linear log-log relaxation-time spectrum and further that for the storage modulus the cytoskeleton is well modeled by the SGR ...

3.1. Rheological Characteristics of the Complex Modulus G^* of the Asphalt Binders. To assess the rheological properties of the original, aged, and foamed binders, the complex shear modulus G^* was analysed. The results for this analysis were selected and compared for the 1.6 Hz frequency.

As part of the validation effort to evaluate the consistency of a new cold in-place recycling using foamed asphalt (CIR -- foam) mix design process for the Iowa Department of Transportation, the dynamic modulus and repeated load tests were conducted to evaluate the performance characteristics of CIR -- foam mixtures over a wide range of loading and ...

Storage modulus of foamed asphalt

1. Introduction. Asphalt mixture is a typical viscoelastic material and stress-strain characteristics are strongly correlated with time and temperature [1], [2], [3]. The response parameters of asphalt mixtures include dynamic modulus, relaxation modulus, creep compliance, etc. in the linear viscoelastic range [4]. While the creep compliance and relaxation modulus are ...

This paper presents the reinforcing effects of the inclusion of short polypropylene fibers on recycled foamed asphalt (RFA) mixture. Short polypropylene fibers of 10 mm length with a 0.15% by ...

Shear storage modulus measures the elastic portion of an asphalt binder while shear loss modulus measures its viscous portion [24], [25], [26]. Slopes of the linear regression equations were used to assess the foamed binders' temperature sensitivity.

Foamed asphalt stabilised base (FASB) material is a partially bound material consisting of four phases of aggregate skeleton, air voids, foamed binder and water. Its mechanical properties and behaviour are greatly influenced by field placement and curing conditions. Given appropriate design and application, the structural capacity of FASB lies ...
