

Using a robust methodology, we investigate the role of green finance in promoting renewable energy for a large sample of 44 countries. We provide several exciting findings. First, green finance significantly promotes total renewable energy, biomass, and non-biomass energy production in the short and long run.

Renewable and Sustainable Energy Transition has a mission to share the most interesting and relevant problems, solutions, applications, novel ideas and technologies to support the transition to a low carbon future and achieve our global emissions ...

In total, the world is set to experience a surge in renewable energy capacity by approximately 16988.4 GW by 2050. This data underscores the accelerating global transition away from fossil fuels and towards a more sustainable, renewable energy future.

The global goal on energy - SDG 7 - encompasses three key targets: ensure affordable, reliable and universal access to modern energy services; increase substantially the share of renewable energy in the global energy mix; and double the global rate of improvement in energy efficiency [1].

This chapter describes sustainability, energy and its use, sustainable energy, and methods and technologies that can be used to enhance sustainable energy. Sustainable energy is important for or a prerequisite to achieving broader sustainability.

This chapter describes sustainability, energy, societal energy use, energy sustainability, and methods and technologies that can be used to enhance energy sustainability. Throughout, the key role and importance of renewable energy are stressed.

Details renewable energies" processes, from production to utilization in a single encyclopedia. Organizes topics into concise, consistently formatted chapters, perfect for readers who are new to the field. Assesses economic challenges faced to implement each type of renewable energy.

Transition towards higher shares of renewable energy (RE) will simplify achieving universal access to clean and affordable energy, reducing GHG emissions and decreasing water scarcity by eliminating freshwater usage in thermal power plants [3].

This study explores a comprehensive energy generation (different renewable energies) based on renewable sources concerning environment safety and sustainability. It has deliberated the viable ways to achieve sustainable energy generation and eco-friendly utilization.
