How much electricity does a Tesla use?

Teslas use a remarkably small amount of electricity given the amount of mechanical work they do and the distance they can travel. An average Tesla uses 34 kWh of electricity per 100 miles. This equates to about 34,000 kWh per 100,000 miles, or between 102,000 kWh to 170,000 kWh for the lifespan of the vehicle.

How much does it cost to charge a Tesla?

Depending on the model, it costs between \$9.62 to \$18.30 to fully charge a Tesla. Teslas have a unique charging port and charger, but you can also use a J1772 adapter to charge at most EV charging stations. A large network of Tesla Superchargers is available for quick charging on the go or for road trips.

How long does it take to charge a Tesla?

How Long Does it Take to Charge a Tesla? It takes between 8 to 40 hours to charge a Tesla. However, there's not a clear-cut answer to this question because so many variables are at play. The charging method, power output, Tesla model, and battery capacity are all going to determine how long your vehicle needs to be plugged in.

How many kWh does a Tesla battery have?

Tesla battery packs are made up of thousands of 18650, 2170, and 4680 battery cells, which range in charge from 3400 mAh to 5000 mAh. These cells, when collected and connected, have a total storage capacity of 85 kWh (in sine models) and 100 kWh (in larger models).
