

The cost of distributed energy storage

With the proposal of China's "dual-carbon" goal, accelerating the construction of a new power system primarily based on new energy is an inevitable trend, while continuously increasing the proportion of new energy in traditional energy is a strategic choice for China and even the world [1,2,3,4,5]. However, as the installed capacity of distributed generation (DG) ...

Introduction. Energy storage systems are widely deployed in microgrids to reduce the negative influences from the intermittency and stochasticity characteristics of distributed power sources and the load fluctuations (Rufer and Barrade, 2001; Hai Chen et al., 2010; Kim et al., 2015; Ma et al., 2015) on both economic and technical aspects, hybrid energy storage systems (HESSs) ...
