

What do whole house generators run on

What is a whole house generator?

A whole house generator is a portable or permanently placed generator that supplies power to your home. While you can use them at any time, they usually activate when the power goes out due to a storm. These generators come in various sizes to power up small electronics such as cell phones up to larger generators that can power your whole house.

Can a generator power a whole house?

Large whole-house generators can power an entire average home, while smaller units provide power for key appliances. These are the best standby models from CR's tests.

How do whole house generators work?

Whole house generators are wired directly into your home's electrical system and connect directly to the fuel source. If the power goes out, these generators will turn on automatically. This means no trudging outside in terrible weather for the homeowner to restore power to their home.

What kind of power does a house generator use?

Traditionally, most modern house generators run on natural gas or propane. For people that live in rural locations, diesel or gasoline-powered generators may be their only option for backup power.

What is a home generator?

A whole house generator, also known as a home generator, backup generator or a standby generator, essentially acts as a backup supply of electricity should the power go out. If there's a power outage, the generator will register this, and automatically supply an alternative source of electricity to power your home.

Are whole house generators worth it?

Whole house generators are a wise investment for those looking for backup power during an outage. Although they are more expensive than portable generators, whole house generators have an extremely long lifespan and run time, especially ones that run on natural gas as fuel.

Fuel Options for Standby Generators. Standby generators can run on various fuel types, each with its own advantages. The choice of fuel depends on availability, cost, and personal preference. ... Smaller units may start around \$2,000-\$6,300, while larger, whole-house systems can exceed \$18,000. *Cost data sourced from Angi. Long-Term Savings ...

Power output: 8,000 to 20,000 watts **Price range:** \$2,000 to \$5,000 **Fuel needs:** 13 to 48 gallons of liquid propane or natural gas per day **Pros:** Whole-house generators are largely worry-free. They ...
